Avery® Frequently Asked Questions

Cards - General Information Questions

Q: Can I print on both sides of my cardstock product?

A: Yes, all Avery card products can be printed on both sides except for C32011 Clean Edge Business Cards which have a special coating on the back of each sheet which allows for each card to have a clean edge without any perforations. Avery has come up with a solution for our consumers who prefer to print on both sides of their business cards: Double-sided Quick&Clean™ Business cards.

Q: Are the envelopes that come with Avery Greeting Cards printable?

A: We do not recommend printing on envelopes. Envelopes can very easily skew and get caught in any printer which can cause damage. We recommend trying mailing labels. Avery manufactures both standard recipient and return address labels in white and clear.

Q: Can I print to the edge on Avery business cards?

A: Most Avery business cards are manufactured with 10 per page with each card touching the card surrounding it which does not allow for print to the edge capability. Avery does manufacture business cards for consumers who prefer to print an entire image on their business cards and these cards are manufactured with 8 per page without any of the cards touching each other which allows for full bleed printing capability.
