

Ultra-Resistant White Plastic Specification Sheet

A unique material that looks and prints like paper but is durable like film. The microporous structure allows inks and toners to form strong bonds with the substrate. The material is waterproof, durable (chemical and abrasion resistant), conformable, steam sterilisable and offers a long life alternative to paper labels. The adhesive is a marine grade permanent, acrylic based adhesive. It is characterized by extremely high tack and adhesion.

To the best of our knowledge this product does not contain any Substances of Very High Concern (SVHC) (revision 21st January 2025) over a limit of 0.1% (w/w).

Information provided here is an overview of the products and there may be additional compliances accreditations or claims. If you have any questions, or require more information about something specific, please contact us at hello@avery.co.uk.
